Unit Testing

a. The Model will be tested at the code level by simulated function calls using java test code, with screenshots of the output (like all previous assignments)

Unit Testing - Data Analysis & Interpretation

Test Criterion	Test Requirement Set	Test Set
Addition	Ensure that the values are	 testAdditionPositiveNumbers()
	added mathematically	 testAdditionFirstNegativeNumber()
	correct.	 testAdditionNegativeNumbers()
Subtraction	Ensures that the values are	 testSubtractionPositiveNumbers()
	subtracted mathematically	 testSubtractionNegativeNumbers()
	correct.	 testSubtractionFirtsNegativeNumber()
Multiplication	Ensures that the values are	testMultiplicationPositiveDecimal()
	multiplied mathematically	 testMultiplicationTwoNegativeNumbers()
	correct.	
Division	Ensures that the values are	testDivision()
	divided mathematically	 testDivisionByZero()
	correct.	
Square	Ensures that the values are	 testSquarePositiveNumber()
	squared mathematically	 testSquareNegativeNumber()
	correct.	
Square Root	Ensures that the values are	testSquareRoot()
	being square root	 testSquareRootNegative()
	mathematically correct.	
Memory	Ensure that the memory	testMemoryAdd()
	functions are working as	testMemoryAddFail()
	per requirements.	testMemoryMinus()
		testMemoryRecall()
		testMemoryClear()

Delete & Clear	Ensure that the Delete and Clear Function are functioning as intended.	testDelete()testClear()
Out-of-Range	Ensure that the calculator application receives value in allowed range (-1000000000 to 1000000000)	testOutOfBoundPositive()testOutOfBoundNegative()

<u>Unit Testing – Summary</u>

• Total Number of Test Criteria: 9

• Total Number of Test Cases: 23

• Test Set Size: 23

All Pass

UI Testing

b. The GUI will be tested MANUALLY by just providing the test cases of given features to be run on the interactive GUI with the expected results. You will need to run each UI test as a sequence of GUI inputs (manually) and record the final output of each test as pass or fail, next to the expected one.

UI Testing – Summary

Total Number of Test Criteria: 9Total Number of Test Cases: 23

• Test Set Size: 23

All Pass

Integration Testing

• Since the UI and model functions are interconnected, the UI tests implicitly cover integration testing.

Conclusion

The testing plan for the calculator application included comprehensive unit tests and manual UI tests. Both tests were executed successfully, with all actual results matching the expected results. This indicates that the calculator application performs as expected, both at the code level and through the user interface. The use of existing exceptions for error handling ensures sturdy performance in edge cases such as division by zero and out-of-bounds value.
